

Data Engine Administration: Zone Management

Introduction

Zone Management is available exclusively for [Dataengine: People Counting](#) and enables administrators to add, modify, and remove zones for occupancy tracking and footfall analysis.

Zone information such as site, current occupancy, occupancy settings, and arrival/departure locations is available. Additionally, administrators can increment, decrement, and reset occupancy in the instance of technical errors.

Adding a Zone

To add a zone, click the [Add Zone](#) button and enter the required information, including:

- Zone Name,
- Zone Site,
- Min Occupancy Threshold (Minimum permitted occupancy within the zone),
- Max Occupancy Threshold (Maximum permitted occupancy within the zone),
- Occupancy Reset Time (The scheduled time for the daily footfall reset)
